IMPORTANT NOTICE: PLEASE READ CAREFULLY BEFORE INSTALLING, CONFIGURING, OR RUNNING THIS SOFTWARE UTILITY.

01 PURPOSE AND SCOPE

MSTS Consist Generator is an independent community-made utility designed to assist users in building Microsoft Train Simulator consist (`.con`) files from locomotive (`.eng`) and wagon/vehicle (`.wag`) configurations detected inside a user-selected Trainset directory. It is provided strictly as a convenience tool. Use of this tool does not replace or lessen the user's ultimate responsibility to properly maintain, archive, back up, configure, and thoroughly test their local MSTS simulation environment.

02 INDEPENDENCE & NO OFFICIAL AFFILIATION

This is an independent, non-commercial fan creation. It is neither affiliated with, nor endorsed, sponsored, or certified by Microsoft Corporation, the developers/publishers of Microsoft Train Simulator, Indian Railways, or any commercial train simulation add-on studio, unless expressly confirmed in an executed written instrument. All designated product names, trademarks, logos, and registered marks belong solely to their respective holders and are cited exclusively for descriptive compatibility purposes.

03 DISCLAIMER OF WARRANTY

The application, its source components, and all generated output files are distributed on an **"AS IS"** and **"AS AVAILABLE"** basis without warranties or representations of any kind, whether express, statutory, or implied, to the maximum extent permitted by governing law. There is no representation or guarantee that the utility will operate without disruption, remain bug-free, scan every custom vehicle, generate error-free consists across non-standard installations, or satisfy specialized workflow needs. Operational outcomes remain subject to individual directory hierarchies, corrupted assets, missing files, and third-party patches.

04 USER RESPONSIBILITY & BACKUPS

Users assume all operational oversight when executing the generator. You are expressly advised to:

- Maintain complete, verified backup archives of your MSTS root files and Trainset directories prior to running scans or applying changes.
- Manually verify path selections (e.g., `TRAINS\TRAINSET`) and review output destination folders before copying generated files.
- Inspect and validate every produced `.con` file within MSTS before employing it in complex activities, timetables, routes, or distribution packages.
- Verify that all constituent `.eng`/`.wag` assets, alongside 3D shapes, sound configs, textures, and custom cab interiors, are correctly present.
- Exercise independent judgment: scanning an asset does not confirm its historical accuracy, gauge compatibility, coupler safety, or route suitability.
- Note that automated filename-matching heuristics and optional tail-stock rules are assistive and may fail to identify non-standard rolling stock.

05 FILES AND SYSTEM CHANGES

The utility generates output consist files in designated folders without modifying system registries. Nevertheless, users must verify destination paths and review overwritten files. The developer disclaims any responsibility for file loss, ruined simulation configurations, overwritten custom stock, or installation damage resulting from use, misuse, or inability to use this software, to the full extent allowable by law.

06 ACCEPTABLE USE POLICY

You are granted permission to use the software for personal, non-commercial, educational, and testing purposes. You agree not to:

- Employ the application to breach governing municipal, state, or international laws or infringe on personal or corporate rights.
- Falsely represent the tool as an official product of Microsoft, Indian Railways, or any railway authority.
- Inject, bundle, distribute, or bind malicious code, spyware, or harmful binaries with this utility.
- Alter, obscure, or remove developer attribution, copyright headers, or credit notices in unmodified redistributions.
- Assert intellectual ownership over third-party models, soundsets, textures, or simulation assets found within Trainset folders.

07 COPYRIGHT & INTELLECTUAL PROPERTY

Source code, user interface layouts, documentation, and original project branding remain credited to **Karthik Iyer — IRTS FAN**, preserving third-party holder rights. This utility confers no license to repackage, monetize, or distribute third-party train models or proprietary MSTS core assets. Those assets remain bound by their original author terms.

08 REDISTRIBUTION & SOURCE MODIFICATIONS

When sharing unmodified copies, distribute complete packages preserving all documentation, disclaimers, and original authorship credits. If modifying the source code, you must visibly denote your modifications and refrain from presenting altered builds as official releases from the original author. No third-party game assets may be bundled without express permission.

09 GENERATED CONSIST (.CON) FILES

Consists generated by this tool are text scripts referencing items cataloged on the user's local disk. The author does not host, provide, or license any referenced rolling-stock models. Successful file creation does not guarantee that a consist will couple, clear loading gauges, or operate without physics conflicts inside the simulator.

10 DONATIONS & EXTERNAL LINKS

Voluntary contributions via Buy Me a Coffee or similar platforms represent optional gratuities to encourage ongoing development; they do not constitute commercial purchases. Linked external services (YouTube, donation gateways) are governed by independent terms and privacy policies beyond the developer's control.

11 PRIVACY & DATA SECURITY

The application is architected to operate locally on your storage volumes without transmitting proprietary simulation files. Because altered copies can be redistributed by third parties, users must inspect and verify the authenticity and source integrity of their executable packages before running them.

12 LIMITATION OF LIABILITY

To the maximum extent permissible under applicable legal statutes, neither the developer nor associated contributors shall be held liable for any direct, consequential, indirect, punitive, or incidental damages, including data corruption, lost simulation progress, or operational disruptions arising from software use.

13 TECHNICAL SUPPORT & UPDATES

Feature development, compatibility updates, and continued availability are provided on a voluntary basis without binding service obligations. To submit verifiable bugs, email `irtslover@gmail.com` with OS/Python environment details, step-by-step reproduction steps, and error traces. Do not transmit copyrighted game assets.

14 ACCEPTANCE OF TERMS

Accessing, downloading, executing, or configuring the MSTS Consist Generator confirms that you have reviewed, understood, and consented to comply with the stipulations herein. If you do not agree to these conditions, you must immediately terminate use and remove the software.
